AMENDMENT TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

LISTING OF CLAIMS:

1. (currently amended) method for use in authenticating a service network to a station, the station having a home environment network, the method comprising:

storing a key at the service network;

transmitting information to the station from the service network that enables the station to compute the key stored at the service network;

receiving a request for service at the service network from the station;

adjusting a verification value at each usage of the key; [[and]]

transmitting, from the service network to the station, information corresponding to the verification value that forms a part of a verification computation enabling the station to authenticate the service network; and

receiving a vector of authentication information from the home environment network of the station, the vector including an indication of the vector's position in a sequence of vectors;

wherein transmitting information to the station that enables the station to compute the key stored at the service network comprises transmitting portions of the received vector of authentication information.

2. (canceled)

Serial No. 09/710,541
Atty Dkt: 99-956

3. (currently amended) The method of claim [[2]]1, wherein the received vector of authentication information comprises the key stored by the service network.
4. (currently amended) The method of claim [[2]]1, further comprising computing at the service network the key stored by the service network based on information included in the received vector.
5. (Previously presented) The method of claim 1, wherein adjusting a verification value comprises incrementing a sequence number corresponding to a number of times the key has been used.
6. (Previously presented) The method of claim 5, wherein the verification value comprises a TSQN (Temporary Sequence Number).
7. (Original) The method of claim 1, wherein
 - the station comprises a cellular phone; and
 - the service network and home environment networks comprise cellular networks.
8. (Original) The method of claim 1, further comprising using the key to compute a cipher key for encrypting communication between the service network and the station.
9. (Original) The method of claim 1, further comprising negotiating use of a cryptographic primitive between the service network and the home environment network.
10. (Original) The method of claim 1, further comprising
 - transmitting a challenge to the station;
 - receiving a challenge response from the station; and
 - comparing the received challenge response with an expected response.

Serial No. 09/710,541
Atty Dkt: 99-956

11. (Original) The method of claim 1, further comprising:
 - computing the key stored by the service network at the station;
 - receiving the information indicating the value corresponding to key usage at the station; and
 - comparing the received value with a value corresponding to key usage maintained by the station.

12. (currently amended) A method for use in authenticating a service network to a station, the station having a home environment network, the method comprising:
 - receiving information at the station from the service network;
 - computing a key based on the information transmitted from the service network to the station, the computed key also being stored by the service network;
 - maintaining an indicator of key usage at the station;
 - transmitting, from the service network to the station, an indicator of key usage maintained by the service network; [[and]]
 - comparing the key usage indicator maintained by the service network with the key usage indicator maintained by the station enabling the station to authenticate the service network;
 - maintaining an authentication vector sequence number at the station;
 - receiving at the station from the service network an indication of an authentication vector sequence number maintained by the home environment network; and
 - comparing the authentication vector sequence number maintained by the home environment network with the received authentication vector sequence number maintained by the station.

13. (canceled)

14. (currently amended) The method of claim [[13]]12, further comprising receiving from the service network identification of a cryptographic primitive.

Serial No. 09/710,541
Atty Dkt: 99-956

15. (Original) The method of claim 12, wherein
the station comprises a cellular phone; and
the service network and home environment network comprise cellular networks.

16. (Original) The method of claim 12, further comprising:
using the key to compute a cipher key for encrypting communication between the
service network and the station.

17. (Original) The method of claim 12, further comprising:
receiving a challenge from the service network;
determining a challenge response; and
transmitting the challenge response to the service network.

18. (Original) The method of claim 12, wherein maintaining an indicator of key usage at
the station comprises maintaining a key sequence number counter.

19. (currently amended) A method for use in authentication in a communications network
including a home environment network, a service network, and a station, the method
comprising:

storing a key at the service network;
transmitting information to the station from the service network that enables the
station to compute the key stored at the service network;
receiving a request for service at the service network from the station;
adjusting a verification value at each usage of the key;
transmitting, from the service network to the station, information corresponding to
the verification value that forms a part of a verification computation enabling the station
to authenticate the service network;

Serial No. 09/710,541
Atty Dkt: 99-956

determining at the home environment network a cryptographic primitive offered to the home environment by the service network; and

based on the determined cryptographic primitive, transmitting to the service network at least one vector of authentication information corresponding to a particular station;

wherein the vector of authentication information comprises:

an indication of an authentication vector sequence number maintained by the home environment network, and

a challenge and an expected response.

20. (Original) The method of claim 19, wherein determining comprises receiving identification of the cryptographic primitive from the service network.

21. (Original) The method of claim 20, wherein the identification comprises a value of a MODE field.

22. (canceled)

23. (canceled)

24. (currently amended) A method for use by a mobile station that can communicate with different service networks, the method comprising:

storing different sets of cryptographic information for the different respective service networks;

selecting one of the sets of cryptographic information for one of the service networks; and

using the one selected set of cryptographic information to communicate with the one of the service networks to authenticate the one of the service networks to the station by:

Serial No. 09/710,541
Atty Dkt: 99-956

storing a key at the one of the service networks wherein each of the sets of cryptographic information comprises:

the key shared by the station and a respective service network; and
an indicator of usage of the key;

transmitting information to the station from the one of the service networks that enables the station to compute the key stored at the one of the service networks;

receiving a request for service at the one of the service networks from the station;

adjusting a verification value at each usage of the key; [[and]]

transmitting, from the one of the service networks to the station, information corresponding to the verification value that forms a part of a verification computation enabling the station to authenticate the service network;

receiving from the one service network an indicator of key usage maintained by the one service network; and

comparing the indicator of key usage maintained by the one service network with the indicator of key usage included in the one selected set of cryptographic information.

25. (canceled)

26. (currently amended) The method of claim [[25]]24, further comprising computing the key shared by the station and the one service network based on information received from the one service network.

27. (canceled)

28. (currently amended) The method of claim [[27]]24, wherein the indicator of usage comprises a sequence number.

Serial No. 09/710,541
Atty Dkt: 99-956

29. (canceled)

30. (currently amended) The method of claim [[25]]24, wherein using the one selected set of cryptographic information comprises using the one selected set of cryptographic information to authenticate the service network.

31. (currently amended) The method of claim [25]]24, wherein using the one selected set of cryptographic information comprises using the one selected set of cryptographic information in encrypting communication between the station and the service network.

32. (canceled)
